

# EISA IN-CAR DSP AMPLIFIER 2020-2021

## ETON Stealth 7.1 DSP

You'll find everything required to transform an in-car factory system into a sophisticated high-class audio setup in Eton's Stealth 7.1 DSP. A masterpiece in compact and discreet design, it features an eight-channel DSP engine to accommodate a full setup of speakers and subwoofer. Programming is possible via desktop software and wirelessly through Eton's DSP control app – the built-in Wi-Fi connection also enabling hi-res audio streaming. In addition to its feature set and excellent connectivity (including high/low-level and optical inputs), the Stealth 7.1 DSP is a commendable amplifier too; a high-efficiency Class-D design promising ultra-low distortion and power up to 180W per channel in stereo mode.
